

ALARM DIALING/MESSAGING SOFTWARE

The SCADAdial hardware/software package is an optional add-on to SCADAview CSX. It is capable of dialing and playing voice messages for any alarms that are generated by SCADAview CSX. Many common alarms have pre-recorded messages that can be used or operators can record their own special alarm messages. The system can also answer incoming calls and allow the user to read back levels and discrete conditions by using a simple touch-tone menu system.

In addition to voice dialing, users can also be sent alarm messages using email and SMS text messages.

If desired, hand-off-auto (HOA) controls can also be accessed through the touch-tone menu for system control.

FEATURES

- Voice message dialing/answering
- Email messaging / Text messaging
- Touch-tone phone DTMF menu system
- HOA control option
- Text-to-speech or recorded messages
- Built-in voice recorder and audio editor
- Cross-platform application - available for Windows, macOS and Linux
