

WEB PAGE ADD-ON

The SCADAweb CSX add-on is a software package available as an optional addition to the SCADAview CSX HMI. It allows viewing of system displays, station displays, event logs, reports, graphical displays and active alarms all via a web page.

The web page can also be used for system control via HOA screens, control group screens and alarm setpoint screens, etc. Security is recommended when control is enabled over the Internet and web page security will integrate with the SCADAview CSX security system.

No special plugins or Active X controls are required on the client browser. All modern web browsers should work fine including mobile devices.

FEATURES

- System and Station Displays
- Graphical Displays
- Control and Security Options
- Trending and Reports
- Active Alarms and Event Logs

REQUIREMENTS

Server Machine:

Windows, OS X or Linux
 Apache web server with PHP scripting or
 Microsoft IIS with PHP package installed
